Instructions to Pupils

- 1. Do not turn over this page until you are told to do so.**
- 2. Answer all questions.**

Part 1: Situational Writing (15 marks)

1. The pictures below show two friends, Andy and Jane, discussing how their friend, Rathy, is the best choice to represent their class in the Inter-class Photography Competition.

David Tan

Greenlife Primary School
Inter-class Photography Competition

Organised by Greenlife Primary Photography Club

All participants will get to attend an exclusive photography workshop by David Tan, a famous photographer. David Tan will also be judging the contest!

Registration details:

Every class has to send in a representative supported by a teacher's nomination.

Deadline for submission of name: 15 October 2020

For more information, please approach Ms Siti, the teacher-in-charge of Greenlife Primary Photography Club.

Hey, Jane! I think Rathy should join this competition! She is a huge fan of David Tan!

You're right, Andy! Rathy takes amazing photographs! She is clearly the best choice! I'll include the nomination form as a document in my email to Mrs Lee!

Your Task

Imagine you are Jane.

Write an email to Rathy's form teacher, Mrs Lee, to ask her to nominate Rathy for the Inter-class Photography Competition.

You are to refer to the information on page 2 for your email.

In your email, include the following key information:

- the purpose of the email
- the organiser of the competition
- two reasons Rathy should join the competition
- the deadline for teacher to submit the name of class representative
- the document included in the email

You may reorder the points. Remember to write in complete sentences.

Part 2: Continuous Writing (40 marks)

2. Write a composition of at least 150 words about being thankful.

The pictures are provided to help you think about this topic.

Your composition should be based on one or more of these pictures.

Consider the following points when you plan your composition.

- What was the situation you have to be thankful for?
- Why were you thankful?
- What happened in the end?

You may use the points in any order and include other relevant points as well.

The Sumerians first invented writing as a means of long distance communication which was made necessary by trade. With the rise of the cities in Mesopotamia, long-distance trade flourished (16) and with it, the need to be able to communicate across the expanses between cities or regions. (17) The earliest form of writing was pictographs which were symbols representing objects. The writing assisted in remembering such things as how many parcels of grain went to which destination or (18) how many sheep were required for events such as ceremonies in the temple. These pictographs were impressed onto wet clay using a sharp marker, known as a stylus. (19)

Writing soon evolved as people wanted to express concepts more complex than financial (20) transactions of lists of items. The Sumerians soon began using a more elaborate writing system using phonograms – symbols representing sounds – which allowed them to easily convey more precise meaning.

Efforts to Save Endangered Wildlife!

Despite mounting global efforts to save endangered wildlife, some species of wildlife still cannot escape the fate of being extinct. Worldwide, many educational programmes and measures are put in place to prevent populations of endangered wildlife from dwindling further.

Zoos

Wild animals are kept in captivity in zoos. Some have been saved from extinction through their breeding programmes. However, some animal activists object to this idea. They believe the animals are held in poor and cramped conditions.

Supporters of zoos argue that these animals are kept in habitats which closely resemble their natural environments. Modern zoos also conduct research and educate people about animals.

Wildlife Sanctuaries and National Parks

These places keep animals safe from being killed illegally. For example, wildlife sanctuaries in Africa allow African elephants to breed in safe environments. This results in an increase in their population. However, some locals object to sanctuaries being established because it may prevent them from using the land for traditional farming or hunting.

African Elephant

Sustainable Fishing

Due to the high demand for seafood, fishing practices all over the world are depleting fish and shellfish populations. To allow marine life to reproduce and increase their populations, we must learn to support habitats by not overfishing. Animal activists also believe strongly in the importance of sustainable fishing. Regulations and government policies are put in place to manage fishing activities. Hopefully, this will ensure that we leave enough fish in the oceans for future generations.

Education

Protection of wildlife is best supported when governments and the relevant authorities work together to educate people on wildlife conservation. They need to be discouraged from using products that contribute to the killing of endangered wildlife. Such products include elephant tusks and tiger skins.

Section I : Comprehension (Open-ended) 20 marks

Read this passage and answer questions 71 to 80.

I have had a successful career. Unlike most people, I am fortunate that my career was my hobby. I am often asked, "What got you interested in the weather?" My answer is always the same, "I had a sign from above."

It was a long time ago now – a summer's morning in 1959 – when I was an 11-year-old boy living in the outer suburbs of Melbourne. The area located over our family's back fence was a large stretch of apple and pear orchards and this formed an ideal playground for the neighbourhood boys. There were three of us in our little gang, all of similar age and small for our size. We spent many hours roaming free in the orchards and most importantly, without any interference from adults.

We had made friends with the local fruit farmer and struck a deal with him. In exchange for us patrolling the area and keeping the other children out, we could help ourselves to all the apples and pears we wanted. We were his unofficial security force and revelled in the authority this gave us. Thankfully, none of the bigger boys in the area challenged us as we would almost certainly have come off the worse for wear.

On one particular summer's morning, we were wandering along one of the long rows of pear trees when we saw something very strange. Draped over a tree was a large plastic parachute and this was tied to a cardboard box, about the size of two loaves of bread.

This interested us greatly. Watching a parachute display at a fair had sparked our interest earlier and our little gang had already spent many hours of spare time making our own, using weighted handkerchiefs and dropping them from a large tree in our backyard. We were enthralled with the way they fell and how far they travelled before hitting the ground.

So, on finding this object, an immediate inspection was called for and we discovered from a written message on the box that the mysterious objects were the remnants of a Bureau of Meteorology weather balloon that had, by pure chance, fallen close to our back fence after a long journey high in the sky across Melbourne.

A printed note on the balloon asked the finder to take it to the nearest post office from where it would be returned, free of charge, to the Bureau of Meteorology. I was amazed by this find and could not stop thinking or reading up about it– my father photographed the three of us holding it as a souvenir – and for a time, we were all the talk of the neighbourhood. The local newspaper even wrote an article about us and what we had found. The following week, I proudly went to the post office accompanied by my parents to do **my duty**, where a disinterested postal official took possession of it. It disappeared back into the sorting room where we assumed it belonged.

I never saw it again, but the events of that golden summer morning would last for the rest of my life. Right there and then, I decided to become a meteorologist and much of my early life became directed with this aim in mind. From then on, I knew what I wanted to be. After earning a degree in Science from the university, I joined the Bureau of Meteorology and spent
